

Launch Campaign

Not a press release and a boosted post. RoutePadi already has real routes and a handful of real contributors on routepadi.com — this is the plan to turn "a few people in Ibadan know about this" into "Ibadan people default to this," starting at the two places that actually matter: a campus and a bus stop.

01 Launch Framing

"Launch" is doing double duty here. The product isn't launching from zero — it's live, it has routes, it has a leaderboard with real names on it. What's actually launching is everything from Milestones 1–6: the new identity, the badge system, the voice. So the honest goal isn't "get press," it's "get Ibadan's next 500 route contributors before the brand relaunch's energy cools off."

THE DEFAULT MOVE

A launch day press release, a boosted Instagram/Facebook ad campaign, maybe an influencer post or two. Standard playbook for a consumer app launch.

WHY THAT'S WRONG HERE

Right now the actual bottleneck isn't awareness — it's route density. A handful of contributors means most of Ibadan still has nothing mapped. Paid reach brings people to an app that has too little to show them yet. The launch should fix the supply problem first, in the two or three physical places where the target user already stands still for ten minutes: a campus, a bus terminal.

02 The Hook

One line the whole campaign hangs off, then how it flexes per audience without changing what it's actually claiming.

Ibadan already knows the way. We just

started writing it down.

CAMPUS

Every UI student already knows the keke shortcut nobody puts in an app. Put yours in this one — it's how RoadKing got to #1.

TERMINAL

You've been giving directions to strangers at this park for years. RoutePadi just gives you XP for it.

ONLINE

Not built by a mapping company that's never sat in Iwo Road traffic. Built by the people who actually ride it.

03 Founding Padi Program

The Brand Bible reserved a handshake badge for **OG Padi** and deliberately left it unbuilt — "kept as a one-off, never reused elsewhere, so its scarcity reads visually too." That's the launch incentive, not a new mechanic invented for this doc. It only means something if it's actually scarce, so the rule has to be as firm as the badge design itself.

OG Padi

Awarded once. Only during the launch window. Never reissued.

Object: two hands closing a deal — one forest, one chartreuse, meeting in the middle. Not "submit 3 routes" like the other badges; this one is earned by showing up during the specific window Ibadan first heard about the relaunch. Anyone can still become a Master Scout next year. Nobody can become an OG Padi next year.

The rule that protects it: fixed dates, no extensions.

Every contributor who submits or verifies at least one route during the Launch Week (Section 04) gets OG Padi, full stop — no cap on how many people can earn it. What's capped is the window, not the headcount. Extending the deadline because sign-ups are slow is the single fastest way to turn a founding-member badge into a participation trophy; if the window undershoots, the fix is louder outreach next time; it is never a later deadline.

04 Timeline

Three phases, roughly ten weeks end to end. Deliberately short on the digital pre-launch teaser — the campaign doesn't have anything to tease that isn't better shown

in person the following week.

WEEKS 1–2 • PRE-LAUNCH

Seed the ground

Recruit campus ambassadors, get terminal management sign-off, print the physical materials, brief the founder for X/terminal appearances.

- Lock campus ambassador shortlist
- Confirm terminal tabling permission
- Order QR flyers & banner (Milestone 8)

WEEK 3 • LAUNCH WEEK

Show up in person

The concentrated push: physical presence at UI campus and the two terminals, daily TikTok/WhatsApp content from the ground, OG Padi window is open and counting down publicly.

- Daily ground activity, all 7 days
- Founder-voice X thread announcing the relaunch
- OG Padi countdown posted daily

WEEKS 4–10 • SUSTAIN

Fold into the rhythm

OG Padi window closes for good. Content drops back to Milestone 6's regular four-day cadence, now with a real influx of new contributors and routes to draw spotlights from.

- First post-launch Community Milestone post
- Ambassadors transition to occasional, not daily
- Review metrics at week 6 (Section 07)

05 Ground Zero: Physical Seeding

Two kinds of venue, chosen for the same reason: people stand still there, in large numbers, for reasons that have nothing to do with an app. That's where a QR code and a two-minute conversation actually convert.

University of Ibadan

CAMPUS AMBASSADORS

41,743 enrolled students

Why here: the single largest concentration of RoutePadi's actual target user in one place, and UI Gate is already a named stop in the product's own example routes — this isn't a new audience, it's the existing one at scale. Students commute constantly, between campus, hostels, and town, and already trade shortcut knowledge informally.

What happens: recruit 8–12 ambassadors from departments and hostel blocks (not a paid influencer, a real student who already gives directions to juniors). Each gets a small stack of QR flyers and a personal referral code so their contributions are traceable. Tabling at UI Gate and the main hostels during Launch Week, not a one-off flyer drop.

Iwo Road & Challenge Terminals

TERMINAL ACTIVATION

Commissioned Nov 2025
• thousands of daily

Why here: Oyo State's newly built, international-standard bus terminals at Iwo Road and Challenge are genuinely new infrastructure serving thousands of commuters daily — a rare moment where the physical transit system and the app's relaunch are both new at the same time. Nobody's saturated this audience yet because the venue itself barely existed before late 2025.

users

What happens: a small table or banner (Milestone 8 asset) near the loading bays, staffed by the founder or a hired local host, for 2–3 hours a day during Launch Week. The ask is simple: "what's a route you know that Google Maps gets wrong?" — answered on the spot, submitted on the spot, OG Padi earned on the spot.

Get permission before showing up.

Both terminals are government-commissioned facilities with active management. Tabling or flyering without checking in first risks getting shut down mid-activation and burning the one shot Launch Week gives it — this has to be confirmed in the pre-launch phase (Section 04), not assumed.

06 Channel Plan for Launch Week

Not a new platform strategy — this is Milestone 6's prioritization, temporarily turned up for one week, with content that's actually about the ground activity rather than generic announcement graphics.

TikTok

DAILY, FROM THE GROUND

A short clip a day from UI Gate or a terminal: an ambassador filming a real submission, a rider's reaction to earning OG Padi on the spot. Rougher is better — this is the platform's native register.

WhatsApp

FORWARD-READY DAILY CARD

A Community Milestone-style card (Milestone 5 template) counting down the OG Padi window and the running route total, built to survive a forward with no caption attached.

X (Twitter)

FOUNDER VOICE, LAUNCH DAY + ONGOING

A plain-text thread on launch day explaining what changed and why, then daily quote-tweets of real traffic complaints with the RoutePadi alternate route attached.

Instagram

STEADY, NOT THE GROWTH BET

Square posts and Stories recapping each day's ground activity — maintenance-tier per Milestone 6, present but not where the push is concentrated.

Facebook Groups

SEEDED, NOT OWNED

The OG Padi announcement dropped into existing Ibadan-focused and UI alumni/parent groups once, credited as RoutePadi — community management, not a content calendar.

07 Metrics & Risks

Success here means the same thing Milestone 6 already argued for: real contributions, not reach. The launch-specific version just adds a way to check

whether the physical seeding actually worked.

METRIC	TARGET	WHY IT'S THE RIGHT ONE
OG Padi badges earned	150+ during Launch Week	The direct count of net-new contributors during the window — the whole point of the program.
Route submissions tagged to UI Gate / Iwo Road / Challenge	Majority of Launch Week submissions	Confirms the physical seeding is what's actually converting, not just background growth.
Ambassador referral-code activity	Every ambassador above zero by day 3	An ambassador at zero after three days is a resourcing problem to fix immediately, not a data point to note in a retro.
Contributor retention at week 6	≥30% of OG Padi earners still active	The real test isn't the launch spike, it's whether Launch Week converts into the ongoing base Milestone 6's cadence is built to serve.

Terminal permission falls through

Fix: UI campus activity doesn't depend on terminal approval — run it regardless, and treat terminal activation as an add-on that can slip a few days rather than a blocker for the whole week.

Ambassadors go quiet after recruitment

Fix: a daily check-in message during Launch Week, not a one-time briefing. Referral-code tracking (above) surfaces this within 48 hours instead of at the retro.

OG Padi gets treated as a stunt, not a real badge

Fix: it renders identically to every other badge in the Profile and Design System — same frame, same tier ring, same achievement-tile treatment. No special "launch graphic" styling that would make it look temporary.

Launch Week submissions are low-quality (unverifiable routes)

Fix: ambassadors and the terminal host walk through one real submission with each new contributor on the spot, rather than just handing over a QR code and moving on.

08 **Status**

Launch framing & objective	LOCKED
Campaign hook & variants	LOCKED
OG Padi badge design & rules	LOCKED

Three-phase timeline	LOCKED
Physical seeding plan (UI campus, terminals)	LOCKED
Launch Week channel plan	LOCKED
Success metrics & risk list	LOCKED
Terminal management permission	TO CONFIRM BEFORE LAUNCH
Printed flyers, banner, QR assets	DEFERRED TO MILESTONE 8

The OG Padi badge closes the loop the Brand Bible opened back in Milestone 1 — a piece reserved and deliberately left unbuilt until it had a real reason to exist. Everything here runs on top of the templates in Social Media Templates and the rhythm in Content Strategy. Next up: Milestone 8, Marketing Assets — the printed flyers, banner, and QR materials this plan depends on.

University of Ibadan enrollment figure via Wikipedia. Iwo Road terminal commissioning date via Oyo State Feedback Service.
